

EMSCULPT®

FREQUENTLY ASKED QUESTIONS

WHAT IS EMSCULPT?

EMSCULPT is the world's only non-invasive procedure to simultaneously build muscle and burn fat. It is the most recent technological advance which has revolutionized the whole field of non-invasive body shaping.

HOW CAN PATIENTS BENEFIT FROM THE PROCEDURE?

With large applicators EMSCULPT helps patients achieve slimmer and more athletic body contours, by reducing abdominal fat and simultaneously building the muscle foundations underneath the fat.

When applied to the buttocks EMSCULPT gives our patients a more lifted, athletic kind of butt that they had long been wishing for. It is the only non-invasive buttock lifting procedure in the world. Patients don't need to undergo surgery anymore to have their butts toned and lifted.

EMSCULPT can improve strength, muscle tone and firmness in arms and calves thanks to the small applicators, which are specifically designed for treating smaller muscle groups.

HOW DOES EMSCULPT COMPARE TO THE OTHER PROCEDURES THAT ARE OUT THERE?

EMSCULPT is the only procedure in the world that not only targets fat, but also simultaneously builds your muscles. All the other technologies are good, but they only treat fat. To look really great, you need to have both your fat reduced as well as your underlying muscles strengthened. Also, EMSCULPT is not based on a heating/cooling principle, so there are no risks of burns, scarring or swelling.

Furthermore, none of the other technologies can give you a non-invasive buttock lift. Through strengthening of all your gluteal muscles, EMSCULPT established a completely new category of treatments - a non-invasive buttlift.

WHO IS THE RIGHT CANDIDATE?

Fairly anyone can benefit from the EMSCULPT procedure. During the consultation, you will discuss the exact expectations with the doctor who will help tailor a specific treatment plan for you.

IS IT SAFE?

The new EMSCULPT is FDA cleared, medical CE-marked, and represents the first innovative technology that has shown in multiple studies to treat both muscle and fat. When you come in for a consultation, the doctor will cover how body sculpting with EMSCULPT works and discuss the unique safety profile in detail.

IS IT PAINFUL?

That is the best thing about the EMSCULPT. Patients say it is completely painless, the procedure feels like an intensive workout. You can lay down and relax during the treatment. I actually had the EMSCULPT procedure and I felt very comfortable. During your consultation, our staff will be more than happy to let you experience the unrivaled comfort of the procedure.

IS THERE ANY DOWNTIME OR PRE/POST TREATMENT PREPARATION?

Compared to other procedures, there is absolutely no downtime with the EMSCULPT. After the procedure it feels like you had an amazing workout, and you can get back to work immediately following the procedure.

WHEN WILL I SEE RESULTS?

This may vary depending on your age, physical condition, BMI and many other aspects. In general patients begin to feel tangible results right after the treatment. Positive results are usually reported two to four weeks after the last session and continue to improve for several weeks following the treatments.

HOW LONG DO THE RESULTS LAST? DO I HAVE TO REPEAT THE PROCEDURE REGULARLY?

Nothing in life lasts forever, but the clinical studies show that majority of patients are still better in both muscle and fat even a year after their treatment series. However we recommend to book another consultation few months after your treatments to see if you may benefit from any additional treatments. Keeping a healthy lifestyle is the key to maintain your results in longer term.

ARE YOU SURE THIS WORKS? IT SOUNDS TOO GOOD TO BE TRUE.

Yes, we have already treated over XX patients in our clinic and we are seeing great results! Everyone is really excited about this technology. Also, there are multiple scientific studies published that document in detail how EMSCULPT helps patients.

HOW MUCH DOES IT COST?

Well it really depends. We need to see you to determine your medical condition, and areas you would like to treat to recommend how many treatments are needed to get the result you are after. Are you available to come in for a consultation so we can provide you an answer?
